

Steering Systems & Hydraulic Power Units

Custom built to suit each vessel

Hypac is a world leader in its field, providing lightweight hydraulic steering systems and power units for a wide range of vessels.

Our steering systems and actuators have been provided with class approval. Power units have been supplied for a wide range of marine, industrial and agricultural applications since 1980.

Our power units are easy to operate and simple to install, while maintaining the high quality and reliability that Hypac customers have come to expect from our products. Hypac power unit designs take into account vessel or application requirements and come with a range of electric motor, temperature controls and valve configuration to suit our customer's individual needs.

Hypac
